

# FET AMPLIFIER

MODEL - AMP32

This board has been designed with a view to provide practical and experimental knowledge of FET amplifier On SINGLE PCB.

## SPECIFICATIONS

1. Built-in Power supply : +15V at 50mA IC Regulated & short circuit protected
2. Power requirement : 230V, 50Hz AC.
3. Following parts provided on Single PCB with connecting terminals.  
FET Transistor BFW11
4. Standard Accessories :
  1. A manual having practical details.
  2. Patch Cords.
5. Experiments:
  - To measure the voltage Gain.
  - To Plot the frequency response characteristics.
  - To find out the Input Impedance.
  - To find out the Output Impedance.

In keeping view of SIGMA policy of continuous development and improvement, the Specifications may be changed without prior notice or obligation.
