

# ANALOG & DIGITAL BREAD BOARD TRAINER MODEL - BBDM102

This trainer has been designed with a view to verify truth table of logic gates and address and to construct small Analog and digital circuits and perform various experiments.

## SPECIFICATIONS

- |    |                              |   |  |
|----|------------------------------|---|--|
| 1. | Breadboard provided          | : | 1 strips - 175mm long with 640 tie points        |
| 2. | Built in Power Supply        | : | + 5 V, 1A. +/-15 V, 250mA Regulated Power supply |
| 3. | Clock generator-TTL          | : | Variable from 0.1 Hz to 1 KHz.                   |
| 4. | Pulsar                       | : | 1 No. provided to apply pulses.                  |
| 5. | LED output level indicators  | : | 8 Nos.   |
| 6. | Logic input switches         | : | 8 Nos.   |
| 7. | Built in Sine wave Generator | : |  |
| 8. | Standard Accessories         | : | 1. Trainer Manual.<br>2. Connecting Wires.       |

In keeping view of SIGMA policy of continuous development and improvement, the Specifications may be changed without prior notice or obligation.
